How do you rate your web development skills before and after completing the project?

Before: 7 out of 10

After: 10 out of 10

Describe your experience working on this project. What is the most exciting part? Most difficult part?

At first, I start with the normal way of writing a web page, but I found it hard to do a responsive webpage without using Bootstrap, which after a while, I found using Bootstrap is the most exciting part.

The hardest part was dealing with cookies using only JS and trying to find a free DNS to use a custom domain name. However, I left the domain name as it is, because it supports the HTTPS protocol by default.
